

Prima Pulling System

And Prima Accessories

welding & joining technologies

PRIMA
Welders

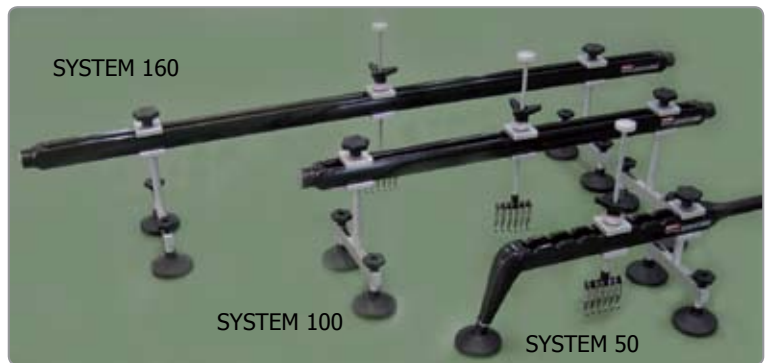

Example of COMBI CAR system with CAR 3 trolley and PA rear perforated panel to hold SYSTEM 50 and SYSTEM 100.

FAST PULLER

The PRIMA pulling systems consist of strong lightweight carbon composite supports from 500mm to 1600mm in length, either used conventionally or with the fast puller.

SYSTEM 160

SYSTEM 100

SYSTEM 50

The PRIMA ANALYSER is a portable hardness testing tool for determining which grade of steel the area of the car body to be repaired is made from, to enable the correct choice of repairing method and welding parameters.

The PRIMATEX 130 is a protective blanket which will protect up to 1300 deg C. size 900mm x 2000mm.

The EVOLUTION welding mask has a lcd 2000 v filter for complete protection and useability.

The PULIPUNTO tool is used for removing paintwork prior to welding.

The PRIMA TERM thermal gel, is sprayed in a masked area around the area to be welded which minimises the heat affected zone and reduces distortion to the panel, thus saving time and money on preparation work.
